

iPad Stand Instructions

This DIY iPad Stand is best for passive iPad use. I designed it to be cheap, easy to build, hold the iPad in both portrait and landscape modes, plus not disturb the dock connector when in the stand. I use this very stand when I watch TV shows with my iPad. While you're at it, you should make a few, as you'll find them great just about everywhere around the house!

1. Print this PDF file on your printer onto a regular sheet of US Letter sized paper (8.5 " x11"). When printing, print the file at 100% (Don't Scale to Fit!)

If you print it right, the dashed line may stop or fade as you get close to the edge of the paper, mostly due to your printers inability to print to the absolute edge. This is fine! Simply cut the line logically to the edge.

2. Then you can lightly trace templates onto stiff cardboard or foamcore using a pencil, and cut out the resulting shapes using a hobby knife.
3. Add a score and fold on the solid line for each backing, then fold in half.
4. Then tape or glue the bottom edges of the stand to the pie-chaped piece, keeping the finger hold in the center, facing front.

Warning

You must use a light touch, as finger swipes on the top half of the iPad may destabilise the stand so that it allows the iPad to fall from it's grasp!
